RECEIVED-WATER SUPPLY

MISSISSIPPI STATE DEPARTMENT OF HEALTH BUREAU OF PUBLIC WATER SUPPLY 2013 JUN 19 AM 9: 34 CCR CERTIFICATION FORM CALENDAR YEAR 2012 Public Water Supply Name 810004 List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year of electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please check all boxes that apply.

	Customers were informed of availability of CCR by: (Attach c	opy of publication, water bill or other)						
	Advertisement in local paper (attach copy of On water bills (attach copy of bill) Email message (MUST Email the message to Other	advertisement) the address below)						
	Date(s) customers were informed:/,/	1 , 1						
	CCR was distributed by U.S. Postal Service or other direct methods used	et delivery. Must specify other direct delivery						
	Date Mailed/Distributed://							
	CCR was distributed by Email (MUST Email MSDH a copy) As a URL (Provide URL As an attachment As text within the body of the email message	Date Emailed: / /						
9	CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)							
	Name of Newspaper: The Coffeeville Cour	18/						
	Date Published: 06/13/13	N. Carlotte and Ca						
	CCR was posted in public places. (Attach list of locations)	Date Posted://						
	CCR was posted on a publicly accessible internet site at the foll	owing address (DIRECT URL REQUIRED):						
I her publithe Sthe Sthe Nam	RTIFICATION Treby certify that the 2012 Consumer Confidence Report (CCR) lic water system in the form and manner identified above and SDWA. I further certify that the information included in this (water quality monitoring data provided to the public water eartment of Health, Bureau of Public Water Supply. Clack The Title (President, Mayor, Owner, etc.)	That I liced dictribution motheds all I

REGEIVED-WATER SUPPLY

2013 JUN 19 AM 9: 34

East End Water Association PWS#: 810004 May 2013

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Lower Wilcox Aquifer.

2012 Annual Drinking Water Quality Report

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the East End Water Association have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Chester P. Ayers at 662.809.6449 (Cell). We want our valued customers to be informed about their water utility. If you want to learn more, please attend the meeting scheduled for the third Thursday in February at 7:00 PM at the Multi Purpose Building.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2012. In cases where monitoring wasn't required in 2012, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10.000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
-------------	------------------	-------------------	-------------------	---	--------------------------	------	-----	--------------------------------

2012 Annual Drinking Water Quality Report East End Water Association PWS#: 810004 May 2013

We're pleased to present to you this year's Annual Quality Weter Report. This report is designed to inform you about the quality water and sendoes we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to confinually improve the water treatment process and protect under resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to very public water system and is available for viewing upon request. The wells for the East End Water Association have received lower to moderate susceptibility rankings to contamination.

If you have anyquestions about this report or concerning your water utility, please contact Chester P. Ayers at 662 809,6440 (Cell). We want our valued customers to be informed about their water utility. If you want to learn more, please attend the meeting scheduled for the third Thursday in February at 7.00 PM at the Mathi Purpose Building.

the third Thursdayin February at 7.00 PM at the Multi Purpose Building.

We realizely monitor for constituents in your dinining water according to Federal and State laws. This table below fists all of the dinining water contaminants that were detected during the period of chanary 1º to December 31º , 2012. In cases where monitoring wasn't required in 2012, the table refers the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pilok up substances or contaminants from the presence of animals of from human activity, microbial contaminants, such as virtues and bacteria, that may come from sewage treatment plants, septile systems, agricultural flussolot operations, and while it inorganic contaminants, such as salts and metals, which can be naturally occurring or result from unban some-water runoff, industrial, or domestic wastewater discharges, oil and pas production, mining, or familing; pestiddes and herbicides, which may be come some a variety of sources such as agriculture, which are beyproducted or residential uses, organic demical constrainants, including synthetic and voiatile organic chemicals, which have beyproducted or industrial processes and petroleum production, and can also orms from gas stations and septile systems; radioactive antermants, which can be nexurally occurring or better result of oil and gas production and mining and septile systems; radioactives. All dirictive presented or other provided of public water stems. All dirictive pater, may be reasonably expected to contain all easts small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contain hand Level (IMCL) - The "htaximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLOs as seasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRCL) – The highest level of a disinfectant allowed in drinking water. There is continoing evidence that addition of a disinfectant is necessary for control introbial contaminants.

Maximum Residual Disinfectant Level Goal (MRCLG) — The level of a drinking water disinfectant below which there is no known or expected disk of health. MRDLOs do not reflect the benefits of the use of disinfectants to control introblal contaminants. Parts per ##ilion (ppm) or Miligrams per liter (m.grl) - one part per million corresponds to one minute in two years or a single pennyln \$10,000.

Parts per billion (ppb) or Morograms per liber - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Chlorine	N	2012	, ,	.3 - 1.1	ang/l	0	MOF		Water additive used to control microbes

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at those levels.

We are required to mention your drinking water for specific constituents on a monthly basis. Results of regular mentioning are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH new notifies systems of any missing samples prior to the end of the compliance period.

tequismonts, MSDM flow notities systems or any missing samples prior to the entro or the complement period.

If present, elevated levels of lead can ceute serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from malerials and components escolated with service lines and home pluming. Our Water Association is responsible for providing high quality drinking water, but connot control the variety of malerials used in plumbing components. When your water has been utiling for serveral hours, you can minimize the potential for lead supcours by flushing your lap for 30 seconds for a minimize before using water for drinking or cooking. If you are concerned about lend in your water, you may with to trave your water sets. Information on lead in drinking water, leafing methods, and slaps you can take to minimize exposure is mealiable from the Safe bornhaing Water Hotline or at http://www.eps.gov/safeterwind-end. The Mississeph State Oppartment of Health Public Health Libboratory offers lead teating. Planse contact 001.576.7582 if you wish to have your water teated.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, increprate or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water posses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hottine at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population, Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergoine organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and irrants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPACIDC guidelines on a perpopiate means to lead met the fish of infection by cryptosporkfium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-428-4791.

****April 1, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING****
In scoordance with the Radionucides Rule, all community public vester supplies were required to earny per quarterly for radionucides beginning January 2007 – December 2007. Your public vester supply completed sampling by the scheduled deadline; however, during an audit of the Massissippl State Department of Health Radiological Health Laboratory, the Environmental Prolection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Attough this was not the result of inaction by the public vester supply, MSDH was required to issue a violation. This is to notify you that as of this daily your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. (I) your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. (I) your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. (I) your water system has completed by monitoring requirements and is now in compliance with the Radionuclides Rule. (I) your water system has completed by monitoring requirements and is now in compliance with the Radionuclides Rule. (I) your water system has completed by monitoring requirements and is now in compliance with the Radionuclides Rule. (I) your water system has completed by monitoring requirements and is now in compliance with the Rule Rule Rule Rule.

The East End Water Association works enound the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

Pray For Our Soldiers And Their Families.
